

DITEX NEWS 

MULTI INJECTION KIT

EDX736

ESSENTIAL DITEX BENCH WITH INTEGRATED ERAGON INJECTOR SYSTEM
(NOT INCLUDED)

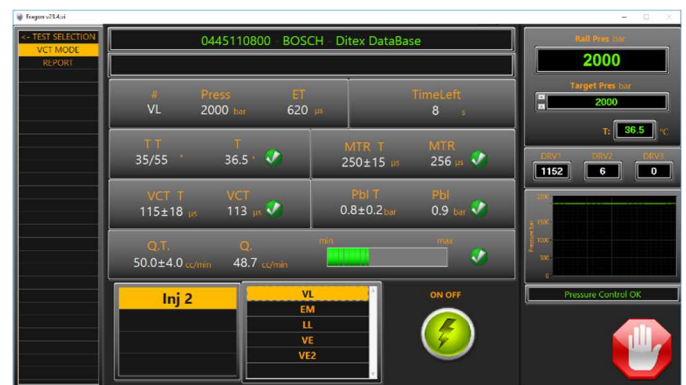

CHARACTERISTICS

With this **hardware and software update** of the bench it will be possible to completely and precisely test and code the latest generation injectors.

On the hardware side, a kit will be supplied for air cooling of the injectors (to stabilize the test temperature), a new cable kit (to prevent external wear from falsifying the test), the installation of a kit to be able to measure and adjust the pressure on recovery channels and the calibration of the Coil control unit for more precise and reliable control of the injectors.

On the software side there will be an update to the Eragon, the introduction of the "VCT mode", a specific automatic mode that will allow the user to have all the necessary data on the screen including the VCT (Valve Closing Time) and the multi-injection.

This test, available exclusively on DiteX benches, will be a further diagnostic tool to verify the correct functioning of the injectors, analyzing pre-injection and main injection in a single test.

MULTI INJECTION TEST PLANS*

*further injectors will be constantly added:
